

# Bibliography for Occupational Diseases of Instrumental Musicians—Update

Susan E. Harman

This bibliography is supplemental to the one that appeared in the December 1987 issue of this journal. The focus is on the physical health problems of instrumental musicians. Hearing disorders, dental problems, and mental disorders, including performance anxiety and substance abuse, generally are not included. The list is mostly confined to the English language. Likewise, no concerted effort has been made to gather information on alternative therapies, such as Alexander, Feldenkrais, etc., although a few entries pertain to those topics. Citations from the medical, musical, and popular literature have been included. The compiler has attempted to provide citations that are as complete and accurate as possible. The bibliography is periodically updated, but the compiler makes no claim of total comprehensiveness.
